

- Notes:
1. Double Drain relieves hydrostatic pressure build up, and provides an additional factor of safety. However, if site conditions allow, Protection Board may be used instead.
 2. Double Drain is to be installed with the filter fleece facing outwards towards the soil/ground.
 3. A maintainable sub-soil drain must be provided at the base of the wall and sub-soil drainage should be capable of discharging water away from the structure.

**INTERNAL TANKING:
VERTICAL TANKING WITH MEMBRANE BELOW FLOOR**
