

- Notes:
1. Liquid Asphaltic Composition can be applied to the outside of the wall, below external ground level, to limit water ingress into the cavity, if thought necessary.
 2. Double Drain is to be installed with the filter-fleece facing outwards towards the soil/ground.
 3. A maintainable sub-soil drain must be provided at the base of the wall and sub-soil drainage should be capable of discharging water away from the structure.

**SUSPENDED FLOOR:
RAISED EXTERNAL GROUND LEVEL**
