

- Notes:
1. RIW Double Drain relieves hydrostatic pressure build-up, and provides an additional factor of safety. However, if site conditions allow, RIW Protection Board may be used instead.
 2. RIW Double Drain is to be installed with the filter fleece facing outwards, towards the soil / ground.
 3. Other RIW products, such as Structureseal or liquid applied materials, may be used if preferred. If RIW Sheetseal 226 is not used, consult RIW Technical Department for lapping arrangements.
 4. RIW Sheetseal 226 must be adequately supported across the 'cavity'.
